

EXLATHENA — ENTERPRISE BRIEF

Catalog Chaos Is Costing You — Meet the Health Score

Dedup with evidence, health scoring, and on-network AI for manufacturing catalogs.

Why master data first

Planning quality collapses when SKU, BOM, supplier, and asset masters conflict. The health score makes that visible.

Approach

Evidence-backed dedup, continuous health scoring, and rationalization as a pipeline stage — not a one-off cleanup project.

- Entity resolution with evidence trail
- Health score on catalog completeness and conflict
- On-network AI for manufacturing catalogs
- Feeds demand, inventory, and PdM modules
